1	user instructions

The Double Mount Rail allows you to easily install ATEN PDUs onto a rack.

For a list of compatible models, please refer to the *Compatible Products* section on the product web page.

Installation

1. Have one person holding the Mount Rail parallel to the rack so that its screw holes are aligned with that of the rack as illustrated.
2. Using 6 self-supplied screws, have a second person secure the Mount Rail onto the rack.

Once installed, users can mount ATEN PDUs, with their cords at the bottom / top of the Mount Rail, by sliding them into place.
